

6.3 Graphing Linear Relations

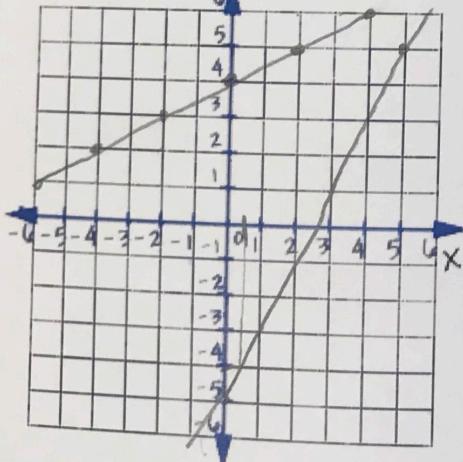

Example 1: Create a Graph From a Table of Values

x	y
-2	-3
0	1
2	5

Example 2: Create a Graph From an Equation

Graph $y = \frac{1}{2}x + 4$

$$y = mx + b$$

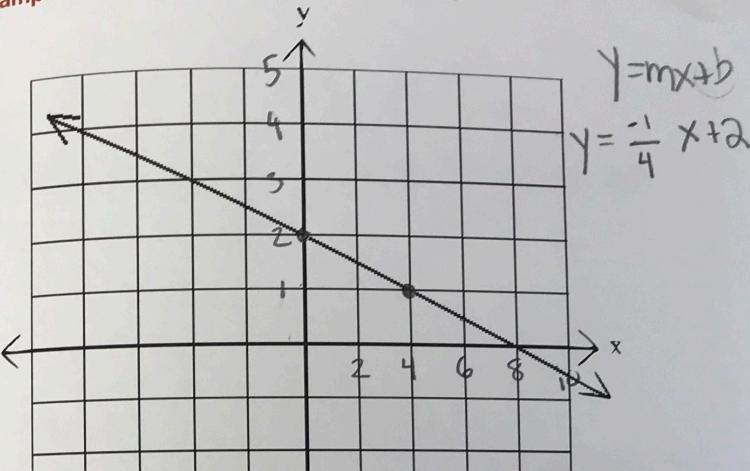

$m = \text{slope}$ $\frac{\text{rise}}{\text{run}}$

$b = y$ value
at $x=0$
 y -intercept

Show You Know

- Graph the linear relation $y = \frac{1}{2}x - 5$.
- Use the graph to estimate the value of y if $x = 8$.
- Use the graph to estimate the value of x if $y = -4$.

Example 3: Create an Equation From a Graph

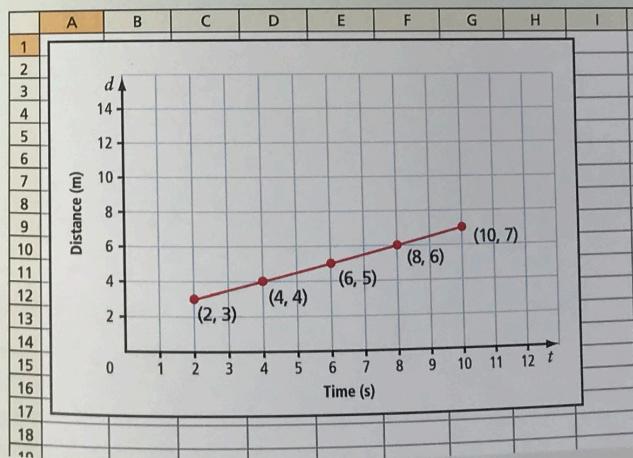

$$y = mx + b$$

$$y = -\frac{1}{4}x + 2$$

Show You Know

Identify the linear equation that represents the graph.

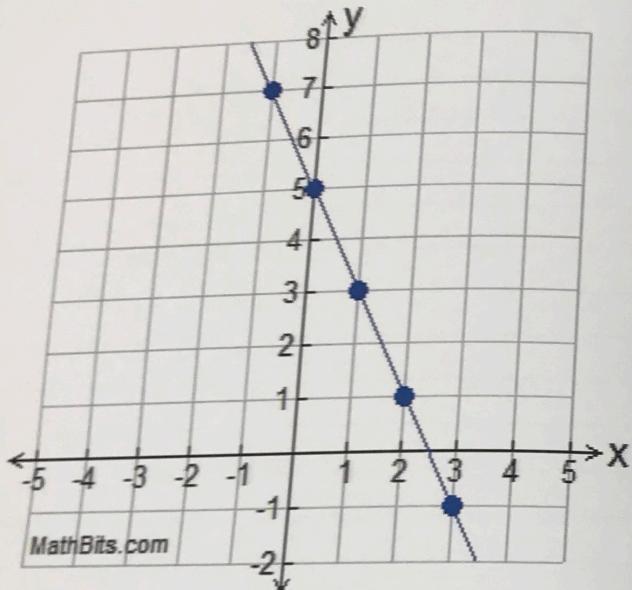

$$\frac{\Delta y}{\Delta x}$$

$$\frac{y_2 - y_1}{x_2 - x_1}$$

6.3 Graphing Linear Relations

Example 4: Create a Table of Values From a Graph

x	y
-1	7
0	5
1	3
2	1
3	-1

Example 5: Create Horizontal and Vertical Lines

For each table of values, answer the following questions:

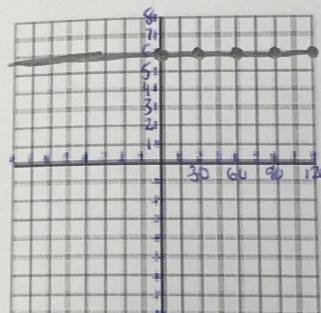

Table 1

Time, t (s)	Distance, d (m)
0	6
30	6
60	6
90	6
120	6

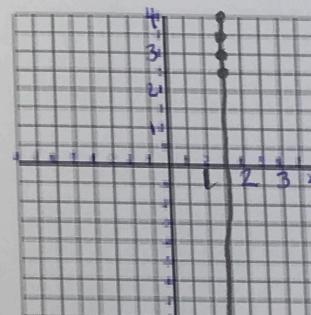

Table 2

Distance, x (m)	Height, y (m)
1.5	2.5
1.5	3.0
1.5	3.5
1.5	4.0
1.5	4.5

- Draw a graph to represent the table of values.
- Describe a situation that the graph might represent.
- Write the equation. Explain how you know the graph represents the equation.

$$y = 6$$

$$x = 1.5$$

Show You Know

- Write the linear equation that represents the graph.
- Explain how you know the graph matches the equation.
