

1. Find the surface area of each object, to the nearest square unit.

	<p>a) square pyramid</p> <p>Area of the base is: _____</p> <p>Area of each triangular face is: $\frac{1}{2} \times \text{_____} \times \text{_____} = \text{_____}$</p> <p>Area of all 4 triangular faces is: $4 \times \text{_____} = \text{_____}$</p> <p>The surface area of the pyramid is: _____ + _____ = _____</p> <p>The surface area of the pyramid is: _____ in²</p>
	<p>b) a cone</p> <p>$SA = \pi r s + \pi r^2$</p> <p>$SA = \text{_____} + \text{_____}$</p> <p>$SA = \text{_____}$</p> <p>The surface area is about: _____</p>
	<p>c) a rectangular pyramid</p> <p>The area of the base is: _____</p> <p>Two triangular faces have a base _____ and a height _____</p> <p>Area of the 2 faces is: $2 \times \frac{1}{2} \times \text{_____} \times \text{_____} = \text{_____}$</p> <p>Two triangular faces have: a base _____ and a height _____</p> <p>Area of the 2 faces is: $2 \times \frac{1}{2} \times \text{_____} \times \text{_____} = \text{_____}$</p> <p>The surface area of the pyramid is: _____ + _____ = _____ = _____</p> <p>The surface area of the pyramid is: _____</p>

2. A triangular pyramid has 4 congruent faces. Find its surface area.

	<p>Four triangular faces have: a base _____ and a height _____</p> <p>The area of the 4 faces is:</p> $4 \times \frac{1}{2} \times \text{base} \times \text{height} = \underline{\hspace{2cm}}$ $= \underline{\hspace{2cm}}$ <p>The surface area of the pyramid is: _____</p>
---	---

3. Find the slant height of this cone, to the nearest tenth of a unit.

	<p>Use the Pythagorean Theorem to find the slant height.</p> $s^2 = \underline{\hspace{1cm}} + \underline{\hspace{1cm}}$ $s^2 = \underline{\hspace{1cm}} + \underline{\hspace{1cm}}$ $s^2 = \underline{\hspace{1cm}}$ $s = \underline{\hspace{1cm}}$ <p>The slant height is about: _____</p>
---	--

4. A wooden square pyramid is to be painted. The side length of the base is 8 cm and the height of the pyramid is 6 cm. To the nearest square centimetre, what is the area that will be painted?

Use the Pythagorean Theorem to find the slant height.

The slant height is: _____

The area of the base is: _____

The area of the 4 faces is: _____

The surface area of the pyramid is about: _____

5. A cone-shaped hat is to be made with a radius of 5 in. and height of 12 in. To the nearest square inch, how much material will be needed for the hat?

The hat is a cone with no base.

Use the _____ to find the slant height.

The slant height is:

$$SA = \pi r s$$

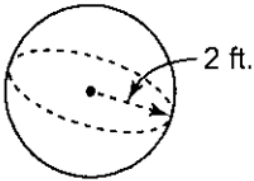

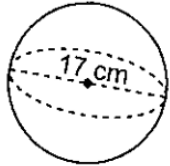

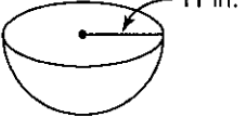

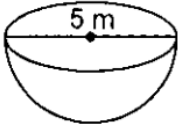

The surface area is about: _____

About _____ of material will be needed.

6. This triangular pyramid has 4 congruent faces. The surface area of this pyramid is 250 square inches. Find its slant height, to the nearest tenth of an inch.

7. Find the surface area of each object, to the nearest square unit.

 <p>A sphere with a center point. A dashed line represents the equator. A solid line with an arrow points from the center to the surface, labeled "2 ft.".</p>	$SA = 4 \pi r^2$
 <p>A sphere with a center point. A dashed line represents the equator. A solid line with an arrow points across the equator from one side to the other, labeled "17 cm.".</p>	
 <p>A hemisphere with a center point on the flat circular base. A solid line with an arrow points from the center to the curved surface, labeled "11 in.".</p>	$SA = 3 \pi r^2$ (half a sphere + area of circle $\Rightarrow 2 \pi r^2 + \pi r^2$)
 <p>A hemisphere with a center point on the flat circular base. A solid line with an arrow points across the diameter of the base, labeled "5 m.".</p>	

8. A solid cork ball is covered in gold plating. It has a diameter of 14 cm.

To the nearest tenth of a square centimetre, what is the surface area of gold plating?

9. A ball has a surface area of 28 square inches. Find the radius of the ball, to the nearest tenth of an inch.

$$SA = 4 \pi r^2$$
