$\qquad$

## Chapter 6 Review

## Key Words

For \#1 to \#5, unscramble the letters for each term. Use the clues to help you.

1. RANEIL RAINETLO $\qquad$ ——
a pattern made by a set of points that lie in a straight line ( 2 words)
2. PLEXATROTEA
to estimate values beyond given data
3. ELINAR QUEIONAT
an equation that relates 2 variables so that the pattern forms a straight line when graphed ( 2 words)
4. TRIPOLENEAT $\qquad$
to estimate values between given data
6.1 Representing Patterns, pages 295-309
5. 

Figure 1 Figure 2

Figure 3
a) The pattern starts with $\qquad$ toothpicks.
b) Complete the table of values for the pattern.
Then, you add $\qquad$ toothpicks each time to make the next figure.

| Figure <br> Number, $\boldsymbol{n}$ | Number of <br> Toothpicks, $\boldsymbol{t}$ |
| :---: | :---: |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |

c) Complete the table to develop an equation relating the number of toothpicks to the figure number.

| Figure <br> Number, $\boldsymbol{n}$ |  | Number of <br> Toothpicks, $\boldsymbol{t}$ |
| :---: | :---: | :---: |
| 1 | $\times \ldots+\ldots$ |  |
| 2 | $\times \ldots$ | $\rightarrow$ |
| 3 | $\times \ldots$ |  |
| 4 | $\times \ldots$ | $+\ldots$ |

Equation: $\qquad$
d) How many toothpicks are in Figure 10? Use the equation to find your answer.

Name: $\qquad$
$\qquad$
6. Derek has $\$ 56$ in his bank account. He plans to deposit $\$ 15$ every week for a year.
a) Complete the table of values for his first 5 deposits.

| Week, $\boldsymbol{w}$ | Amount in the <br> Bank, $\boldsymbol{A}$ (\$) |
| :---: | :---: |
| 0 | 56 |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |

b) What equation models this situation?
$\qquad$
c) How much money will Derek have in his account after 35 weeks?
d) How long will it take him to save $\$ 500$ ?

### 6.2 Interpreting Graphs, pages 311-320

7. The graph shows the relationship between air pressure and altitude.

Air pressure is measured in kilopascals ( kPa ) and altitude is measured in metres (m).

a) At an altitude of 1500 m , the air pressure is approximately $\qquad$ kPa.
b) At an altitude of 2400 m , the air pressure is approximately $\qquad$ kPa.
c) The air pressure is 90 kPa when the altitude is approximately $\qquad$ m.
d) The air pressure is 60 kPa when the altitude is approximately $\qquad$ m.
e) Does it make sense to interpolate or extrapolate values on this graph? Circle YES or NO. Give 1 reason for your answer.
$\qquad$

Name: $\qquad$ Date: $\qquad$
8. The table shows the student and teacher populations at 8 schools.

| Number of Students $(\boldsymbol{s})$ | 100 | 250 | 300 | 450 | 700 | 150 | 1025 | 650 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of Teachers $(\boldsymbol{t})$ | 9 | 15 | 17 | 23 | 33 | 11 | 46 | 31 |

a) Graph the data on the grid.
b) How many teachers might be in a school that has 850 students? $\qquad$
c) If there are 1200 students in a school, there might be approximately $\qquad$ teachers.
d) How many students might attend a school that has 30 teachers? $\qquad$

e) If there are 50 teachers in a school, there might be approximately $\qquad$ students.

### 6.3 Graphing Linear Relations, pages 322-339

9. a) Graph the linear relation represented by the table of values.

| Time, $\boldsymbol{t}(\mathbf{h})$ | Distance, $\boldsymbol{d}(\mathbf{k m})$ |
| :---: | :---: |
| 0 | 30 |
| 1 | 90 |
| 2 | 150 |
| 3 | 210 |
| 4 | 270 |
| 5 | 330 |

b) Describe a situation that might result in this data.
c) Develop a linear equation to model the data: $d=$ $\qquad$ $t+$ $\qquad$ _.
d) The first blank in the equation is the numerical coefficient. What does it represent?
$\qquad$
The second blank is the constant. What does it tell you?

Name: $\qquad$
$\qquad$
10. Use the equation $C=40+20 d$ to find the cost of renting a snowboard. $C=$ rental cost in dollars; $d=$ number of rental days
a) Complete the table of values.

Then, graph the linear relation for the first 5 days.

| Rental <br> Days, $\boldsymbol{d}$ | Rental <br> Cost, $\boldsymbol{C}$ |
| :---: | :---: |
| 0 |  |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |

b) From the graph, what is the approximate cost of renting the snowboard for 1 day? $\qquad$
7 days? $\qquad$
c) A snowboard costs $\$ 300$ to buy.

How many days of renting would it take before it becomes cheaper to buy it?
Use your graph to find your answer. $\qquad$
d) How could you find the answers to parts b) and c) without using the graph?
